Product Description

Product Description

Electric top-down honeycomb shutters Automatic honeycomb shutters

What is Honeycomb blinds

Honeycomb blinds are a unique window treatment that looks great and keeps your home warm all year. Their specifically designed honeycomb construction traps air in separate pockets, resulting in insulation that can help you save money on your energy expenses. Honeycomb blinds can be used to decorate almost any type of window, including skylights and unusually shaped windows.

Our Product

Benefits of Honeycomb Blinds

Improved Insulation

These blinds help keep the cold out in the winter and block the heat from the sun in the summer. They have fabric cells that trap air and give improved insulation.

They conserve air-conditioned cool air inside during the summer months and heat within your rooms during the winter months. Honeycomb blinds help to improve your home's insulation and energy efficiency in this way.

Profile is Slim

Honeycomb blinds have a slim appearance. When the material is raised, the shade stacks at the top, the size of which varies depending on the shade's length.

Improved Privacy

blinds are an excellent alternative if you want blinds that give both improved insulation and more privacy. When compared to other blinds, they are better prepared to block out light more efficiently. This is feasible because the blinds have numerous layers that effectively block out light, making it difficult to see through them from the outside. Choose the double cell option with blackout or room darkening materials for even more seclusion.

Cancellation of Noise

Honeycomb blinds' cellular design also helps them filter out some outside sounds. You may create a peaceful and relaxing atmosphere in your home by this way.

Specification

item	value
